Collect, store, govern, and analyze data at scale with the help of 27Global and AWS

Get insights faster with a broad set of analytic tools

Data and data sources are growing rapidly both in volume and diversity. This data also needs to be securely accessed and analyzed by any number of applications and people. The size, complexity, and varied sources of data means that customers need solutions that can help them analyze data at the scale and flexibility they need.

Put data at the forefront of strategic decision making - 27Global

27Global understands the importance of backing a decision with facts and data. That's why we bring together specialists with deep, systems-building experience and data expertise to deliver-

1) Business & technical expertise to properly align solutions with clients' business needs,
2) Architecture so client data platforms are built using the best, most cost-effective technology with a focus on reliability and security,
3) Project planning & tracking so our client always knows the status of their data effort.

Whether you want to expose new revenue streams or cost-saving opportunities, let 27Global maximize the value of your data.

Benefits of Data and Analytics solutions on AWS

Faster insights

Gain a broad set of analytic tools at a lower cost to help you get business insights faster.

Secure

Keep your data safe by leveraging tools that meet the requirements of the most security-sensitive organizations.

Flexible and scalable

Collect, store, categorize, and analyze your data at scale, with services that meet your unique needs.

Maximize value

Find new revenue or cost-saving opportunities hidden in data that is centralized, organized, accessible, and reliable.

Use cases

- Data lakes: Migrate massive volumes of unrelated data to a data lake on AWS, where it can swiftly and simply be leveraged for critical business insights.

- Modern data warehousing: Unlock insights by migrating, collecting, transforming, and visualizing your data on Amazon Redshift.

- Real-time analytics: Turn streaming data into actionable insights to accelerate decision making using APN Partner services built on Amazon Kinesis.

- From Data Transfer to AI/ML: To maximize value returned and minimize disruption of critical business systems, 27Global prioritizes comprehension and strategic execution of clients' data initiatives.

Maximize value of data assets & empower strategic decision making.

27Global's Data solutions maximize the value returned to clients by turning data into assets & empowering organizations to put data at the forefront of strategic decision making. Data services include:

Data modeling & architecture, Data platform engineering & implementation, Pipeline implementation & automation, Data integration, BI & Analytics, Machine Learning.
